The AOD Transmission is a reliable automatic gearbox known for its simple design, durable construction, and efficient overdrive function. By lowering engine RPM during highway driving, it helps improve fuel economy and reduce engine wear over long distances. Commonly used in older rear-wheel-drive vehicles, it provides smooth gear engagement and dependable everyday operation. Replacement units are typically inspected for clutch wear, fluid condition, and internal component integrity before being offered for sale. Drivers often notice smoother shifting and more stable highway performance after installation. With proper maintenance, including regular fluid changes and transmission servicing, the AOD Transmission continues to provide reliable long-term operation.
